

Press Release „PULS in Chomutov“:

Unusual design, excellent working conditions, ecologically aware construction engineering and state of the art production facilities

PULS makes combinational circuit parts for the DIN rail and is the technological market leader in this segment. PULS has been manufacturing successfully in the Czech Republic since 1999. Its successful expansion soon highlighted the need for a bigger production capacity.

After a long professional development phase, PULS has succeeded in setting a new standard in industrial architecture.

Work on the new factory started in September 2005, heralding a new era in design, and the result is there for all to see. What is more, the PULS building has been nominated for the prize for the best industrial building in the Czech Republic.

This nomination was not only made for the factory's unusual design, but also for the ergonomically planned working conditions for the 300 employees, not to mention the ecologically and environmentally aware construction methods used.

On 30th June, PULS celebrated the opening of the factory with representatives from the government and industry, partners, customers, the press – and the employees of course.

Company-portrait:

PULS is a specialised manufacturer of DIN-Rail power supplies with global presence. For years of innovation PULS was honoured in 2006 with the Frost & Sullivan Award for Technology Leadership. PULS products are extremely reliable, combined with small size and high efficiency. The owner-managed company with headquarter in Munich produces products in Europe and China.
